

ATS Company Profile & Services

Enterprise Solutions
Enabling Technology
Infrastructure Support

**A leading provider
of award-winning
IT products and
services that fully
address unique
business
requirements and
consistently
surpass client
expectations.**

Founded in 1978, Advanced Technology Systems (ATS) specializes in building enterprise applications and the infrastructure that supports them. Today, ATS employs over 900 professional staff. With revenue of \$109 million in 2002, ATS ranks in the top 10% of IT companies in the Washington Metropolitan area.

ATS has one goal: to ensure clients realize the maximum benefit for their investment in information technology. Our three core competencies encompass the following: Enterprise Solutions, Enabling Technology, and Infrastructure Support. ATS's reputation for technical expertise and excellence in these areas is unsurpassed.

ATS professionals demonstrate an unfailing dedication to their work. Led by a senior management team that believes the strength of its people is its greatest asset, ATS hires and retains some of the industry's most outstanding IT talent. Employees enjoy an exciting, team-oriented environment where they are constantly challenged and encouraged to grow. This fosters a spirit of cooperation, pride, and achievement, and is the cornerstone of our growth and continued success.

Asset/Supply Chain Management
Financial Management

**Comprehensive
enterprise
solutions that
maximize
productivity,
improve service,
and take your
business exactly
where you want
to go.**

What We Do

ATS builds mission-critical financial management, knowledge management, administrative/tracking, asset management/supply chain management, case management, and documents/records management systems that handle large amounts of organizational data. Our integrated solutions, coupled with analysis and reporting capabilities, provide insightful and secure information to the enterprise.

Who We Are

The ATS staff is comprised of people who possess both demonstrated business experience and advanced technical expertise. Our collective knowledge base enables our clients to deploy the appropriate business solutions even in the most challenging environment.

How We Work

Our approach is simple and straightforward. We analyze our client's business objectives on an enterprise level. We then leverage our extensive experience and the most effective enabling technologies to build a comprehensive enterprise business system.

For more than 25 years, ATS has developed enterprise solutions ranging from financial asset management and loan servicing to case and document management.

- Our partnership with one major federal agency enables them to more efficiently manage an \$18 billion loan portfolio. This ATS project, along with several others, earned a prestigious Hammer Award.
- ATS systems support case management in areas ranging from wage complaints to Internet fraud and labor law compliance. We developed several Web-enabled client/server solutions that increased collection of civil penalties and compliance with fair labor laws.

Enabling Technology

Legacy Systems Integration/Migration
Desktop Architecture & COTS Integration
e-Business
Web-based Implementations
Workflow & Imaging
Database/Data Warehousing

**Employing
technology to
preserve critical
institutional
knowledge and
information
processing
capabilities for our
clients.**

What We Do

ATS specializes in enabling large user groups to work together more efficiently using tools such as Email and the World Wide Web. For example, our clients are able to collaborate on cases and file reports without ever having to pick up the phone or step away from their desks. We have also created entire software development environments, enabling the use of a variety of methodologies such as Information Engineering, Rapid Application Development and Object-Oriented analysis, design and programming. Other technologies, such as work flow and imaging, help to effectively streamline our customers' business processes.

Who We Are

ATS's staff consists of experts who are industry-certified in their respective fields. We are highly committed to training our staff, ensuring their expertise remains current as technology evolves. Most importantly, our staff pays close attention to new updates and releases of hardware, networking and software products and to improvements in the way they are integrated.

How We Work

Spanning 25 years of technological change, from the mainframe to the desktop, ATS has helped its clients to assess their technology requirements, evaluate the usefulness and applicability of new products, and integrate new technology with legacy systems. ATS successfully designed and implemented:

- A Lotus Notes-based collaborative work flow process for a nationwide network of field inspection offices and an Eastman Workflow system for financial document management.
- A complete software engineering environment using a variety of middleware, database, and EDW tools and capable of re-engineering enterprise-wide work processes, systems, and data warehouses.
- Microsoft Windows-based web applications that provide citizens and government employees with e-business capabilities ensuring easy access to information from multiple legacy systems on disparate computing platforms.

Infrastructure Support

Desktop Support
Database Administration
Web Server Administration
Messaging/E-mail Administration
Help Desk Support
Training Support

Infrastructure support solutions built on cutting-edge technology and the wisdom that only experience can provide.

What We Do

ATS gives its clients superior control over the enterprise with desktop management services that ensure availability, reliability, performance, and support for new applications. Besides supporting the existing architecture, ATS can provide a smooth transition to a client's modernized target environment. We do this by applying the latest network management tools to ensure the most efficient use of enterprise resources. We also use proven help desk techniques to ensure the highest level of end user support and customer satisfaction.

Who We Are

ATS staff develops and maintains support systems that help people in large organizations work more efficiently. Our professionals work with clients to plan, deploy, manage, and maintain their entire IT infrastructure. We are uniquely positioned to offer industry-leading products and more than 25 years of practical knowledge to deliver powerful enterprise solutions.

How We Work

ATS provides infrastructure support for a wide variety of applications. Examples include:

- Desktop Support. Design, develop and implement PC-based solutions for clients' end user communities.
- Database Administration. Provide database administration support for development, integration, and production databases that span the architectural spectrum (e.g. Mainframe: DB2, CICS, DMS-I I00; Client/Server: Sybase, Oracle, Informix, Microsoft SQL; Desktop: Microsoft Access).
- Web Server Administration. Support Internet test centers, Internet production servers and Internet information servers.
- Messaging/Email Administration. Evaluate, implement, and administer email and Lotus Notes infrastructures for applications.
- Help Desk Support. Provide 24x7, Tier-1, Tier-2, and Tier-3 support for enterprise-wide applications serving thousands of end-users in geographically dispersed locations.
- Training Support. Provide the full scope of training to include development (training materials), presentation (class room instruction) and administration (scheduling, classes, maintaining rosters, and creating reports).
